

Your IT infrastructure is more open – and more vulnerable – than ever before

Your organization's working environment has never been so open. Endpoints have become a critical tool for sharing and storing both sensitive and critical business information. Every day your employees leave the secure perimeter of your corporate network to do their work - while at home, at a partner office, and on the road. They routinely carry with them proprietary and confidential data, use critical business applications, and make ad-hoc connections to who-knows-where while outside the physical walls of your organization. Additionally, they have access to internal data sources via the Internet at anytime, from anywhere.

Because of the reliance on these business assets, endpoints have become extremely valuable. In case of disruption, your overall business operations could be negatively impacted – resulting in a loss of business revenue. Be forced to publicly disclose the compromise of confidential data and your credibility and brand could be crushed. Experience unauthorized usage of systems, applications, and data by disgruntled employees and your business could fall prey to your ready and willing competition...

Are your endpoints properly protected against the attacks and misuse your organization faces on a daily basis ?

Which endpoint security strategy will you choose?
Select a dynamic, integrated and efficient approach.

SkyRecon Systems addresses endpoint protection with a unique multi-layered approach. Since its inception in 2003, SkyRecon has designed and developed an innovative, efficient, and integrated solution providing for dynamic endpoint security policy implementation and enforcement.

Our patented technology, directly tied to the core functional aspects of the operating system, addresses in one single agent all threats targeting your endpoint: attacks against known and unknown software vulnerabilities, data loss and theft, and the unauthorized use of the system, applications, network connections, removable devices, and data.

StormShield's unique multi-layered offering gives you the choice of implementation and management of the endpoint protection functionality your business requires: anti-malware protection and Host-IPS, anti-virus and anti-spyware, device control, data encryption, application control, WiFi protection, and Network Access Control.

With SkyRecon, protect what matters

Customers that have selected SkyRecon as their endpoint security partner benefit from advanced, award-winning technology. Hundreds of prestigious organizations trust SkyRecon to protect their critical business servers, internal employee desktops, and mobile worker laptops: FN Manufacturing, Brinks, NEC, Renault, Peugeot, Midas, Rothschild, Alcatel... Just as these organizations have done, it is time you protect your business with comprehensive endpoint control and protection. It is time to protect what matters.
